riva light cure HV

riva light cure

ionglass™

THE DENTAL
ADVISOR
2011 Preferred Products
(Riva Light Cure)

Combination of GIC advantages and composite advantages

Riva Light Cure is a light-cured, resin-reinforced glass ionomer restorative cement. Glass ionomers release fluoride and chemically bond to the tooth structure whilst composites have excellent esthetics. Riva Light Cure is a combination of both with excellent esthetics, fluoride release and chemically bonds to the tooth structure.

Exceptional handling

Riva Light Cure HV can be manipulated immediately after mixing. It is a very sculptable material. It does not stick to instruments and resists any initial threading traditionally found with a light cured GIC. Riva Light Cure HV does not lift off after placement, particularly in the maxillary position.

Great marginal adaptation

Riva Light Cure is the answer to long term microleakage prevention. Use it as a restorative or a base under permanent restorations. "...light-cured and self-cured glass ionomer bases were more effective in reducing microleakage in both the occlusal and proximal cavo surfaces than a flowable resin." ⁽¹⁾

Riva Light Cure

Flowable composite

Red dye indicates marginal leakage

Proprietary Bioactive ionglass™ technology

Riva Light Cure utilizes SDI's proprietary *ionglass*™ filler developed by our glass technologists. *ionglass*™ is a radiopaque, high ion releasing, bioactive glass used in SDI's range of glass ionomer products. Riva Light Cure releases fluoride to assist with remineralization of the natural dentition.

BPA free

Riva Light Cure does not contain any Bisphenol A (BPA) or its derivatives. Use this product with confidence and peace of mind.

Highest color stability

Riva Light Cure has excellent resistance to common stains such as black tea and red wine. Riva Light Cure absorbs about half as much color from these tannin-rich solutions.

Orange light safe tip

Riva Light Cure's capsule has a transparent orange nozzle. This protects the paste from curing under operating light in between placement.

[^] Riva Light Cure HV (High Viscosity)

Simple procedure

Riva Light Cure is quick and simple to place. No bonding procedure is required. It chemically bonds to the tooth and provides ion exchange to demineralized dentition.

Long term wear resistance

The surface hardness of resin-reinforced glass ionomer cements means good long-term wear resistance. The greater the surface hardness, the greater the resistance to permanent surface indentation.

surface hardness at 1 day**

High flexural strength

High flexural strength ensures reduced cracking and failure in flexion. Riva Light Cure has excellent flexural strength.

flexural strength at 1 week (3)

Fabulous esthetics

Riva Light Cure is available in 11 shades: A1, A2, A3, A3.5, A4, B2, B3, B4, C2, C4 and bleach. Riva Light Cure enables natural looking restorations with chameleon effects.

Indications

	Riva Light Cure	Riva Light Cure HV
Non stress bearing Class I and II restorations	✓	✓
Class III restorations	✓	✓
Cervical (Class V) restorations	✓	✓
- Cervical erosions	✓	✓
- Abfraction lesions	✓	✓
- Root surface restorations	✓	✓
Deciduous teeth restorations	✓	✓
Geriatric restorations	✓	✓
Core build ups	✓	✓
Pit and fissure sealing	✓	
Temporary fillings	✓	✓
Liner	✓	
Base / dentin replacement	✓	✓
Co-curing with composite (Sandwich technique)	✓	✓

riva light cure/light cure HV

instructions:

- 1 Isolate tooth, prepare cavity. Apply Riva Conditioner for 10 seconds or Super Etch 37% Phosphoric Acid for 5 seconds.

- 2 Wash thoroughly.

- 3 Remove excess water. Keep moist.

- 4 Activate the capsule and immediately mix in an amalgamator.

- 5 Immediately place into capsule applicator and click trigger until paste is seen through the nozzle.

- 6 Extrude Riva Light Cure in increments of no more than 2mm into cavity and contour.

- 7 Light cure each increment for 20 seconds.

- 8 Final finishing under water spray can begin immediately after light curing.
