Do not compromise on predictable cleaning.

4 reasons to use PractiPal® Tray system

#1

Organized work flow

Pre-configured tray systems for each treatment. Minimizes quantity of instruments. Maximizes treatment efficiency thanks to a simple simple cleaning procedure.

#2

Safety first

PractiPal holds all instruments securely preventing accidents and cross contamination.

#3

Improved hygiene control

The open design allows maximum water and steam penetration to ensure maximum cleaning effect. Instruments are secure yet loose enough to avoid blind spots.

#4

Light and non-metallic

Avoids electrolytic corrosion. Light weight reduces heat energy loss and risk of overload in autoclaves.

PRACTIPAL®
Design by Dentists™

Do not compromise on predictable cleaning. PractiPal.

The belief that sterile is “clean and safe” is a common misconception. Residue can still remain on Instruments even after cleaning. This “sterile” residue can cause severe inflammatory reactions. Predictable cleaning is essential for 100% control.

PractiPal trays, with minimised frame, incorporate an ingenious means of securing instruments loosely, to ensure maximum water penetration for optimum washing, ultrasonic cleaning or simply rinsing. Maximises cleaning, maximises confidence.

Optimum cleaning, easy storage and safe handling makes PractiPal the product of choice.

PractiPal includes secure bur, file and accessory holders that securely clip into the tray but are easy to remove.

The wide range of colours and types of accessories make it easy for you to design and differentiate “Set-ups” for surgery, dentist and individual operatories. Once a cassette is “Set-up” it can be recycled time and time again. Simple, practical and helpful.

Do not compromise on predictable cleaning.

Suitable and practical: what are the ideals of a tray sytem?

Infection control is a major challenge to healthcare practice. An area of high vulnerability is instrument reprocessing so a good tray system that enforces a strict routine is essential. The success of cleaning, disinfection and sterilization is significantly dependent upon the design of the tray being used.

The equipment and procedures used in the clinic will largely determine the success of decontamination.

Easier handling of instuments
A tray system should facilitate the efficient handling of instruments throughout the complete reprocessing/cleaning cycle. An effective tray system with pre-prepared instrument sets for each different treatment prevents the risk of confusing clean and used instruments, saves time and improves your clinic's efficiency.

Light & non-metallic
Trays should be made of a light, non-metallic material. This avoids electrolytic corrosion resulting from dissimilar metals. It also reduces heat energy loss and noise from metallic trays. The heavier the load, including the tray, the longer the time for disinfection and sterilisation.

Secured but free
Instruments should be securely held within the tray but free to move for thorough cleaning. Trays that firmly hold instruments and/or have insufficient water penetration can leave microbiological residue on your instruments. An area of contact will not be properly cleaned and disinfected.

Instrument logistics
Very important and often overlooked, are the logistics of instrument handling. A common mistake is overloading. The more congested the routines, the more difficult it is to keep track of instruments. Regular review is recomended to ensure that cleaning efficiency, storage capacity and sterility are optimized. Practipal makes it easier for you to be organized and maintain your standards.

Thorough cleaning is essential
An item heavily loaded with microbiological material will be more difficult to sterilize than one lightly contaminated. The most effective stage of any decontamination procedure is thorough cleaning and this should accompany or precede all disinfection procedures.

PractiPal your Practice Friend, meets that specification. An ideal system to optimise your infection control process.

The pleasure and efficiency of PractiPal in your practice.

Quiet, light weight and colourful. A pleasure to work with! Fiberglass-reinforced PractiPal is made of highly durable plastic that does not absorb heat in steam autoclaves and washer disinfectors aiding the cleaning process and saving energy costs.

PractiPal Tray System includes trays with bur stands, file stands, consumables and accessories that can easily be secured onto the trays throughout the whole cleaning and disinfection process.

Extremely quiet
Our fiberglass-reinforced durable plastic simply does not clang and bang like metal.

Safe for you and your staff
Instruments securely held in PractiPal help avoiding accidents, at the same time as simplifying the inspection of instruments. Single use materials and hazardous waste can be easily removed and thrown into the waste bin.

Improves practice efficiency
PractiPal tray system includes bur stands, file stands, consumables and accessories that can easily be secured into the trays. They are held securely throughout the whole cleaning and disinfection process. Both tray clamp and bur stand/file holder are easy to open.

Once prepared a tray "Set-Up" is cycled over and over again. After treatment PractiPal allows the disposal of waste but holds instruments and burs in place for cleaning and sterilisation.

Minimises the number of instruments in the treatment area
Your pre-prepared tray contains only what you need for the procedure.

Minimises the number of instruments in your practice
Experience has shown that most dental practices have lots of superfluous instruments. Savings as high as 20% have been reported by dentists who have adopted the system and put into use all of the instruments in the practice.

Organises your practice
Bur and accessory holders are so easily misplaced. Our simple solution is to secure the instruments, burs and accessories in Pre-prepared trays for use over and over again. After treatment the used but complete tray is replaced with a new "Set-Up" for the next patient.

Set-up Proposals

Complete Set
Preparation and Restoration Full Tray

Bur stand for 16 burs
