

"Excellent handling and modelling, great mimetic effect!"

Excellent

Esthetics made easy

The new Ceram.x Spectra[™] ST is a universal composite for all cavity classes in the anterior and posterior region. Its distinct chameleon effect allows for a precise and reliable shade match resulting in highly esthetic restorations with one single translucency.

Anterior restoration

After restorations with Ceram.x Spectra™ST A3 from 32 to 43.

Posterior restoration

Tooth 36 with an occlusal caries lesion.

Restoration with Ceram.x Spectra™ ST A2 giving the tooth back its lost anatomy and natural esthetic appearance.

Indirect restoration

SDR® flow+ placement and preparation.

Indirect restoration with Ceram.x Spectra™

Indirect restoration on 26 and 27 after cementation and polishing.

Ceram.x Spectra™ ST Universal Composite Restorative

Excellent adaptation and sculptability

SphereTEC and conventional filler as well as ytterbium fluoride; content varies ±2 % among shades.

Ceram.x Spectra™ ST

Exceptional

Handling

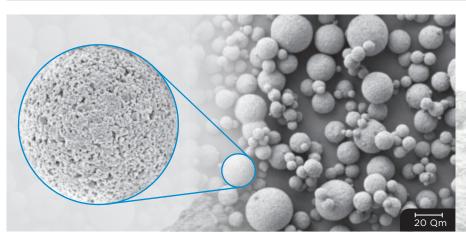

A new filler technology containing granulated spherical fillers in combination with an optimised resin matrix system results in preferred handling properties:

- Adapts easily to cavity surfaces
- Doesn't stick to hand instruments
- Easy to sculpt
- Slump resistant

Explore the novel filler technology

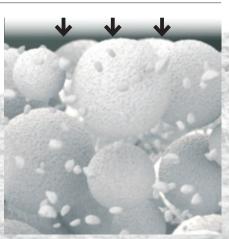

Ceram.x Spectra[™] ST

Ceram.x Spectra™ ST is based on the advanced granulated filler technology SphereTEC™ which is patent applied. SphereTEC™ stands for the process of manufacturing microscaled, well-defined spherical superstructures, comprising of submicron glass. The SphereTEC™ fillers' morphology, particle size distribution and surface microstructure are key for the enhanced handling comfort and esthetic outcome.

Microstructured surface of a SphereTEC™ filler (d3.50 ~ 15 µm), obtained via spraygranulation process from submicron glass

SEM picture showing SphereTEC™ spherical prepolymerised fillers providing a ballbearing effect that enables excellent adaptation and sculptability.

The micro-granulated structure of SphereTEC™ is able to bind more free resin compared to usual fillers. Therefore Ceram.x Spectra™ ST does not stick to hand

Dr. Wilhelm Bestler, Germany

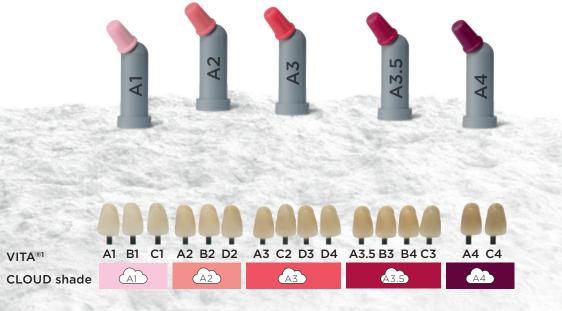

"Perfect shade match and optimum sculptability at the same time!"

Extremely simple

CLOUD shade concept

The new CLOUD shade concept is designed to achieve shade match with the full range of VITA®1 shades with a minimised number of universal shades. Ceram.x Spectra[™] ST contains five CLOUD shades of moderate translucency named A1 to A4.2

- 5 CLOUD shades cover the full VITA®1 range
- Reliable shade match thanks to a distinct chameleon effect
- Smart i-shade label for a quick translation into VITA®1

VITA® is not a registered trademark of Dentsply Sirona. Additionnally a Bleach White shade is available in Compules® Tips for the restoration of bleached teeth!

Ceram.x Spectra[™] ST -The Universal Composite restorative for all cavity classes

Experience

Fast and easy polishing

Ceram.x Spectra[™] ST provides a fast and easy polishing procedure with both, silicon based polishers and abrasive discs, resulting in an outstanding

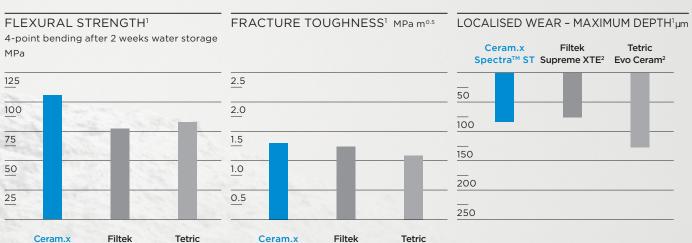

Extra stong for

Long lasting restorations

Ceram.x Spectra[™] ST is an ideal universal composite for durable stress bearing posterior restorations.

Spectra[™] ST Supreme XTE² Evo Ceram²

Lohbauer U and Belli R, 2015

High flexural strength is considered by international standards to be an important mechanical property for posterior restorations bearing occlusal stress.

Spectra[™] ST Supreme XTE² Evo Ceram²

Lohbauer U and Belli R, 2015

High fracture toughness is needed to resist propagation of cracks in the material and improves longevity of a restoration.

Low loss of material is beneficial in occlusal contact areas under chewing forces for a stable occlusion.
